

EngraveLab | 10

NEW IN ENGRAVELAB VERSION 10!

The professional's choice when it comes to engraving software.
The full-featured design and optimized production engraving tool-set
now includes more features and powerful functionality than ever.

COMPLETE TOOLSET FOR LASER
AND SPINDLE-BASED ENGRAVING

EASY, ACCURATE AND DETAILED
PHOTO CONVERSION

INDUSTRY-LEADING, AUTOMATED
BRAILLE ENGRAVING FEATURES

STUNNING 3D PRODUCTION USING LASER
AND SPINDLE-BASED ENGRAVERS!

- View a complete 3D preview using simple rotate, spin, apply texture and simulated depth displays.
- Eliminate costly production errors with full output preview.
- Optimize production to improve tool path power and speed.

LEARN ON THE GO WITH THE NEW COMPASS TOOL

CADlink
TECHNOLOGY CORPORATION

Making your machines run better.

Compass. Your all-in-one learning resource is context-sensitive, so it moves with you as you navigate. Includes articles, videos and even bonus docs! Available in multiple languages.

ENGRAVELAB VERSION 10 NEW FEATURE HIGHLIGHTS

Import virtually any design files. Import files from competitive engraving software along with virtually unlimited other file types, including SVG and STL.

Unicode™. Features global language support offering consistency in text encoding, handling, and representation.

Direct workflow plug-ins. Send files from the latest CorelDRAW® and Adobe® design applications directly into EngraveLab.

Select Object. Handy collection of selection tools, including objects of different types, groups, vectors, tool paths, and more.

Windows™ 10, 8, and 7 support. 64- and 32-bit OS compatibility.

Microsoft™ DirectX. Enhanced drawing flexibility.

Optimized memory handling. Fast bitmap re-draws on large files.

Program presets. Save preferences for program re-installs.

Workspace. Simplified and customizable options for ease-of-use.

Advanced True Shape Nesting. Save material by nesting objects on the workspace, including Contour Cut and Clipped objects.

Repeat Nesting option. Nest objects on plate by type.

Bézier node editing. Add, delete and edit Béziers with full node and path editing, featuring a node type-convert tool.

Barcode. Automate your workflow even more with 70+ symbols supported, including Datamatrix and QR.

Clipping and Masking. Quickly and easily apply a clip path to one object from another with exact dimensions, including clip path editing tools.

Layer Manager. Manage workspace objects across layers with ease.

Contour Fill. One-click External or Internal Contour Fill based on the selected object with an editing SmartBar.

Production Spooler. New and enhanced functionality so you can free up local resources and send jobs to output.

Automatic Vectorization. Automatically converts black and white images to vectors on import.

Rulers and Dials. Improved functionality to specify requirements.

Grade 1 & 2 Braille Translator. Everything you need for Braille with Unified English and 50+ foreign languages. Fully ADA-compliant.

Fit Text to Frame. Insert any text into an object frame with auto-sizing and kerning.

Text to Centerline. Create single line engraving fonts with a single click. Apply text to centerline and let EngraveLab finish the conversion.

Gravostyle™. Support for CHR/CAR fonts.

3D Relief, Spiral, and Texture Fills. Create detailed images with advanced, optimized controls and tools to ensure a smooth finish.

NC/HPGL Manager. Simulate G-code and toolpath movement and output time.

Note: All features not available in all packages. [For details, please contact CADlink.](#)
